

*“Welcome to the  
New Age of Anti - Age!”*

The New England Facial &  
Cosmetic Surgery Center

Before and after photos showing how Dr. Petropoulos achieves natural and harmonious results by addressing each of five signs of aging (dynamic wrinkles, static wrinkles, volume loss, skin laxity, and poor skin texture) with non-invasive rejuvenation techniques.

## Introducing Therma-Frax: A Non Invasive Beauty Breakthrough

*Dr. Petropoulos is Among First in the Country to Offer New Procedure*

**Danvers, MA**—Dr. Anna Petropoulos, a Board Certified Facial Plastic Surgeon and leader and innovator for over a decade in non-invasive facial rejuvenation techniques, is one of the first nationwide to offer a new medical aesthetic solution that turns back the clock on aging and sun-damaged skin—Therma-Frax, the latest non-invasive beauty breakthrough.

Therma-Frax provides the benefits of traditional skin resurfacing techniques with minimal discomfort, and no significant downtime. This new combination treatment combines the superior results from the breakthrough Fraxel “Re:store” laser retexturing treatment (which treats age spots, sunspots and wrinkles), with Thermage®, a radiofrequency skin tightening and contouring treatment. Thus both the surface of the skin and the depths are tightened and rejuvenated. Both treatments are FDA-approved procedures and have undergone extensive testing with clinical case studies.

Dr. Petropoulos will be presenting the latest concepts in non-invasive rejuvenation, featuring Therma-Frax and Sculptra facial volumisation in a complimentary informational seminar and demonstration open to the public on *Wednesday, March 3rd 2010* at The New England Facial Cosmetic Surgery Center, 80 Lindall Street Danvers, MA 01923, Tel. 978-739-9500. Space is limited - RSVP suggested to [frontdesk@classicface.com](mailto:frontdesk@classicface.com)

The first part of the procedure: Fraxel “Re:store” uses a laser treatment to activate advanced skin rejuvenation. It is the accepted gold standard for treating acne scars, periorbital wrinkles, and for skin resurfacing procedures on the face, neck, chest and hands, resulting in smoother skin texture with no social downtime. An effective treatment regime generally requires 3 to 5 treatment sessions spaced about 4 weeks apart.

“I wanted to tell you how delighted I am with the results of my first Fraxel treat-

ment. I’d been feeling that my skin was looking old and tired. Since the treatment, I’ve really noticed an improvement in my skin—my friends have commented, and shockingly enough, so has my husband! I’ve heard that my skin looks very soft, smooth and glowy, says Jill J., a patient of Dr. Petropoulos from Marblehead, MA. “My husband told me I look gorgeous! This is the best thing since Botox! I can’t wait for my next treatments.”

The second part of the Therma-Frax treatment involves Thermage, which heats the deepest layers of the skin to tighten existing collagen and stimulate new collagen growth. Natural looking results appear over time in the course of your body’s collagen rebuilding process. As the pioneer of safe, effective skin tightening technology, Thermage is the treatment you can trust.

“The results we are achieving with Therma-Frax are remarkable,” says Dr. Petropoulos. “The new-generation laser resurfacing and skin tightening treatment gives the skin predictable and glowing results, making people very happy.”

### About The New England Facial & Cosmetic Surgery Center

The New England Facial & Cosmetic Surgery Center offers safe, affordable, modern cosmetic treatments for those that want to turn back time. Surgical, non surgical, permanent, and non permanent techniques are available with personal consultations to provide the best treatment option for your needs, based on skin type, bone structure, overall health, and realistic expectations.
