

INTRODUCING FRACTORA

A NON-INVASIVE BEAUTY BREAKTHROUGH!

PRESS RELEASE:

Dr. Petropoulos, among the first facial plastic surgeons in the country to offer new procedure, was most recently invited to present Fractora at the Annual American Society of Plastic Surgeons' conference in Boston, MA.

Dr. Anna Petropoulos, a Board Certified Facial Plastic Surgeon and leader and innovator for over fifteen years in non-invasive facial rejuvenation techniques, is one of the first nationwide to offer a new solution, Fractora, that turns back the clock on aging, sagging and sun-damaged skin. This latest, non-invasive beauty breakthrough is a fractionated radio-frequency treatment for wrinkles, tone and texture, and better still... also tightening!

FDA-approved Fractora surpasses benefits of traditional skin resurfacing techniques with minimal discomfort, and no significant downtime. It is color blind and can treat all skin types including Mediterranean and ethnic skins, unlike

lasers that are limited to lighter skins. This new treatment combines the superior results of four other treatments all in one at a fraction of the cost. Both the surface of the skin is retexturized and the depths are tightened and rejuvenated.

The most common areas of treatment are the lower eyelid, upper eyelid, smile lines, cheeks, mouth, and neck. While the full face and neck are often treated, it is also possible to treat smaller areas like cheeks and nose, where many people have localized acne scarring. Fractora is also successful on other parts of the body such as neck, chest, hands and stretchmarks with no social downtime.

"I am so much happier when I look in the mirror each morning. I feel and look

so much younger, there is a skip in my step. Life is good! No, LIFE IS GREAT!"
-Terry, 67 year old RN from Salem MA.

Don't wait, pick up your prescription for perfection and sport your new natural and youthful overall facial tightening with Fractora. Call our office today and mention this press release to receive a complimentary consultation.
